## PROJECTS

---

### Danebook ([github](#))

A social network with authentication, posting, commenting, liking and friending. Technologies used: Ruby on Rails, Bootstrap, Paperclip w/ AWS for image upload, Delayed Job, AJAX, Git, and HTML5

### Congress Tracker ([github](#))

A RoR-powered app that allows visitors to discover their representatives in Congress, view the bills they recently voted for, and how they voted. Pulls data from the Sunlight API, and uses Google Maps Geolocator API to pinpoint visitor location. Emails configured with SendGrid and Delayed Jobs.

### Park App ([github](#))

Another RoR-backed app that draws on the Chicago Parks API to offer visitors park recommendations based on the activities they enjoy. The product of an 8-hour hackathon.
